Annual AHERA Notice For School Year 2018 - 2019

Dear Parents, Teachers, Building Occupants, and Employees:

Pursuant to the Asbestos Hazard Emergency Response Act (AHERA) of 1986, this is to formally notify you, as we are required to do at least once each school year, that the Park Ridge Board of Education has an approved management plan relating to the identification and location of asbestos-containing materials. These plans are on file in each school office and also in the Buildings and Grounds office, and are available for your inspection.

Currently specific areas are being tested further in the High School during the districts HVAC replacement project. All areas of concern will be addressed as per the regulations. Otherwise, the Board will continue to maintain other ACBM identified in place under the operations and maintenance program.

Our six-month inspection was conducted in August 2018, and our next scheduled inspection will be in January 2019. The last Three Year Inspection required was completed in August 2016. Maintenance of asbestos-containing materials is an ongoing program in this district. Surveillance and other consulting activities are being performed by Karl & Associates, a qualified asbestos management consultant retained by the board for assistance in these matters. Currently, all AHERA testing is being done by Karl & Associates.

If you have any questions or need additional information, please do not hesitate to contact me.
